Portfolio: jaimeyperez.com

Professional Summary

Solutions engineer, software developer, and technical project manager delivering hospital RTLS, infant protection, and clinical infrastructure projects across the U.S. and LATAM. Combines bilingual stakeholder leadership with hands-on expertise in networking, servers, databases, AI/RAG, and automation to take complex healthcare systems from solution design through go-live.

Experience

Securitas Healthcare Oct. 2024 - Present
Solutions Engineer / Technical Project Manager / Software Developer

- Lead end-to-end architecture and delivery for hospital-wide RTLS, Hugs & Kisses infant protection, and environmental monitoring systems, translating clinical workflows into Cisco wireless, RF, server, database, and high-availability designs.
- Serve as the primary technical partner to hospital IT, clinical leaders, executives, and sales teams from discovery and solution demonstrations through implementation, validation, go-live, and post-deployment troubleshooting.
- Own LATAM solution delivery as the sole bilingual English/Spanish solutions engineer, leading implementations across Puerto Rico, Costa Rica, and Mexico while adapting training and technical plans to regional teams and clinical environments.
- Direct multi-site project execution across budgets, vendors, resource plans, milestones, risks, and escalations, coordinating engineering, product, sales, clinical, and customer teams around deployment readiness.
- Diagnose complex production issues across wireless networks, Windows and Linux servers, SQL Server, Tomcat, ActiveMQ, authentication, certificates, and HA infrastructure; convert field evidence into repeatable diagnostic and remediation playbooks.
- Build privacy-conscious engineering tools - including HAR/PCAP diagnostics, guarded configuration agents, architecture generators, and citation-grounded knowledge assistants - to standardize planning, troubleshooting, configuration, and knowledge transfer.

Entheospace Feb. 2024 - May 2025
Software Engineer

- Developed and maintained web-based software using JavaScript, PHP, SQL, HTML, and CSS.
- Collaborated with cross-functional teams to integrate systems seamlessly.
- Improved software reliability by ˜20% via testing and debugging.
- Integrated cloud solutions and automation to streamline inventory and logistics.

V-Clean 2022 - 2023
Account Manager

- Managed client relationships; contributed to ˜15% YoY revenue growth.
- Built a centralized project-phase database to boost efficiency.
- Developed a quoting website; reduced the sales cycle by ˜30%.

Jocelynne's Boots (Remote) 2019 - 2022
Procurement Manager

- Sourced and managed procurement for a leather-goods network.
- Implemented laser-etched leather products, driving ˜10% revenue lift.
- Maintained vendor relationships; reduced lead times and expedited delivery.

UMC Lubbock, Las Palmas Medical Center 2019 - Present
Pharmacy Technician

- Enhanced digital pharmacy operations by resolving technical issues.
- Compounded and modified prescriptions with ˜99% accuracy.
- First pharmacy technician recognized annually by nurses for excellence.
- Built foundational knowledge of medical devices (e.g., pacemakers).

Projects

InterviewOS Integration Training Hub | *JavaScript, REST APIs, WebSockets, System Design*
- Built a single tabbed workspace that embeds three interactive training applications while preserving each lab's local browser state and hands-on exercises.
- Added beginner-friendly missions covering WebSockets, REST/SOAP decisions, authentication, retries, C2 data flow, capacity estimates, reliability tradeoffs, and interview rehearsal.

MobileView HAR & Network Analyzer | *TypeScript, RAG, Express, PCAP, Docker*
- Built a local React/TypeScript and Express platform that correlates HAR traffic, MobileView logs, configuration evidence, PCAP/PCAPNG captures, and RAG-retrieved product knowledge to isolate application and network delays.
- Combined deterministic diagnostics with citation-grounded AI narratives, sensitivity screening, interactive network maps, multi-format reports, and Docker or standalone Windows distribution.

HUGS Configuration AI Agent | *Python, LangGraph, SOAP, SQL Server, Docker*
- Designed a two-agent LangGraph workflow that converts site configuration sheets into validated intent, detects live HUGS configuration drift, and produces an approval-ready change plan.
- Enforced dry-run defaults, human approval, administrator authorization, deterministic SOAP/SQL adapters, independent read-back verification, and auditable results for safety-critical changes.

MV J-Sage Knowledge Assistant | *TypeScript, RAG, React, SQLite, Docker*
- Created a citation-grounded RAG assistant for a 959-document MobileView/AeroScout corpus with BM25 retrieval, symptom-aware query expansion, tool-assisted re-query, and inline Mermaid diagrams.
- Added DOCX/PDF export, local SQLite persistence, Docker packaging, and a sanitized-reference pipeline that prevents raw customer identifiers from entering shipped artifacts.

Gateway Architectural Designer | *React, TypeScript, Three.js, Konva, PDF.js*
- Built a local-first React/TypeScript tool for importing, aligning, and calibrating multi-floor hospital plans, then placing vertically projected gateway stacks with per-floor adjustments and estimated coverage overlays.
- Added interactive 2D/3D review, IndexedDB autosave, portable project archives, high-resolution engineering PDF export, automated tests, and self-contained Windows distribution.

Education

University of Texas at El Paso 2019 - 2024
Bachelor of Science in Biochemistry and Computer Science
- **Honors**: Dean's List, Best Medical Science Student, Best Mathematical Student

Technical Skills

Programming: Python, TypeScript, JavaScript, SQL, Next.js, React, Node.js, Express, Flask, PHP, HTML/CSS, API Integration
Infrastructure: Networking & IP configuration, RF/RTLS systems, Server deployment, Cloud architecture, Vercel deployment, Postgres / Supabase, Blob storage, System commissioning, Hardware/software troubleshooting
Software: Full-stack web development, Automation scripting, Database design, System integration, RAG & AI agent orchestration, Network traffic analysis, Privacy-aware local AI systems, Excel data processing, Rule-engine design, Diagram generation & export pipelines
Medical: Healthcare technology systems, Medical device knowledge, Clinical workflow understanding, Medical terminology
Professional: Client management, Problem solving, Communication, Cross-functional collaboration, Simplifying complex systems, Technical sales, Solution selling, Stakeholder coordination, Bilingual client relationship building, Objection handling
Tools: Claude, Anthropic API, LangGraph, ChatGPT, Gemini, Ollama, Docker, Git, Salesforce, Fieldwire, Microsoft SQL Server, Supabase, Vercel, Linux, Windows Server, VMware / Hyper-V, Cisco Wireless LAN Controller (WLC), Apache Tomcat, OpenSSL, ReportLab, openpyxl, Notion, Obsidian, Confluence, Jira

Leadership & Involvement

- Assistant Project Manager - Securitas Healthcare Latin-American HUGS Projects
- Volunteer/Member - American Heart Association, University Medical Center, Local Churches
- Treasurer - Health Occupations Students of America (HOSA)
- Member - Dr. Bernard Harris Pre-Medical Society (TTU), Coding Interview Club
- Research Assistant - Texas Tech University, University of Texas at El Paso
- Programming Assistant - Back-end development for small businesses & university projects
- AI Club - Securitas Healthcare AI development playground developer and tester
