EXPERIENCE

Securitas Healthcare

October 2024 - Present

Solutions Engineer / Project Manager / LATAM Clinical Educator / Developer

- Lead end-to-end solution design and deployment of hospital-wide RTLS, infant protection (Hugs & Kisses), and environmental monitoring systems across multi-site health systems, translating clinical workflow requirements into Cisco networking, RF infrastructure, and server architectures.
- Serve as the primary technical point of contact for hospital IT, clinical leadership, and executive stakeholders throughout the pre-sales and implementation lifecycle, scoping requirements, running solution demos, and driving technical wins from discovery through go-live.
- Own the full LATAM portfolio as the sole bilingual (Spanish/English) solutions engineer, leading implementations across Puerto Rico, Costa Rica, and Mexico and expanding delivery capacity in markets previously underserved due to language and regional coverage gaps.
- Manage project lifecycle for multi-site hospital deployments as assisting project manager, overseeing budgeting, vendor coordination, resource planning, deadline tracking, and escalation management across cross-functional teams.
- Partner with sales, product, and engineering teams to troubleshoot complex integration issues spanning databases, authentication, certificates, and wireless infrastructure, reducing escalations and accelerating time-to-value for hospital customers.
- Design and deliver bilingual clinical education programs, workshops, remote trainings, and go-live support for nursing, IT, and executive stakeholders, ensuring sustained adoption of patient safety technology in labor and delivery and other high-acuity units.
- Develop internal Python and AI-assisted tooling to automate deployment documentation, technical analysis, and reporting workflows, applying full-stack and machine learning experience to reduce manual overhead for the implementation team.

Entheospace

February 2024 - May 2025

Software Engineer

- Developed and maintained web-based software using JavaScript, PHP, SQL, HTML, and CSS.
- Collaborated with cross-functional teams to integrate systems seamlessly.
- Improved software reliability by ~20% via testing and debugging.
- Integrated cloud solutions and automation to streamline inventory and logistics.

V-Clean

2022 - 2023

Account Manager

- Managed client relationships; contributed to ~15% YoY revenue growth.
- Built a centralized project-phase database to boost efficiency.
- Developed a quoting website; reduced the sales cycle by ~30%.

Jocelynn's Boots (Remote)

2019 - 2022

Procurement Manager

- Sourced and managed procurement for a leather-goods network.
- Implemented laser-etched leather products, driving ~10% revenue lift.
- Maintained vendor relationships; reduced lead times and expedited delivery.

UMC Lubbock, Las Palmas Medical Center

2019 - Present

Pharmacy Technician

- Enhanced digital pharmacy operations by resolving technical issues.
- Compounded and modified prescriptions with ~99% accuracy.
- First pharmacy technician recognized annually by nurses for excellence.
- Built foundational knowledge of medical devices (e.g., pacemakers).

PROJECTS

Machine Learning Tumor Classification | *Python, PyTorch, CNN, Medical Imaging*

- CNN model classifying brain tumor tissues from MRI scans. Achieved ~95% accuracy using RGB on 12,000 images.

AI Face Detection | *Python, OpenCV, dlib, Computer Vision*

- dlib + OpenCV face detection with ~96% accuracy; bounding-box overlays with robust performance.

Project Management System | *Next.js, React, Supabase, Prisma ORM, AI (OpenAI), TypeScript, SQL*

- Full-stack Next.js platform for managing multi-stage hospital implementation projects. Features sequential workflow stages, AI-powered email generation, client info management, Supabase integration, Prisma ORM, and a real-time dashboard with dark/light theme toggle. Designed for field engineers coordinating deployments across multiple hospital sites.

Dynamic System Architecture Builder | *Python, Tkinter, Next.js, TypeScript, ELK.js, Graphviz, ReportLab, PyInstaller*

- Desktop and online architecture-design platform for RTLS/HUGS environments. Expanded the original Tkinter + Graphviz builder with ELK auto-layout, a Next.js web implementation, shared configuration mapping, layout and PDF export APIs, URL-driven config loading, and professional SVG/PNG/PDF output generation for Cisco and Non-Cisco HA or singular deployments.

Environmental Monitoring Analysis Tool | *Python, Flask, openpyxl, xlrd, Rule Engine, Excel Automation*

- Local Python web application for analyzing Securitas MobileView environmental monitoring exports. Built a configurable rule engine to cross-reference asset and tag inventories, flag compliance and naming anomalies, drive interactive filtering dashboards, and export client-ready Excel reports for investigation and remediation planning.

LPMC Scheduler | *Vite, JavaScript, Node.js, Postgres, Vercel Blob, Excel Processing*

- Responsive scheduling portal for Las Palmas Medical Center supporting public pharmacist and tech schedule viewing, admin Excel uploads, PTO request submission and approval workflows, downloadable schedule files, and durable cloud-backed storage. Built with a Vite frontend and Node/Vercel deployment flow using Blob storage and Postgres, with local JSON/file fallbacks for offline development.

Jocelynn's Boots Invoice System | *Next.js, React, TypeScript, Supabase, Tailwind CSS, Invoice Workflow*

- Next.js invoicing and operations dashboard for a custom boot business with login flow, client and product management, invoice creation, printable invoice detail pages, status updates, notifications, and Supabase-backed persistence. Structured as a modern admin workspace with reusable UI components and dashboard views for clients, products, invoices, and settings.

Project Milestone Tracker | *Vite, Supabase, JavaScript, Role-Based Auth, Vercel*

- Mobile-first project tracking web app built with Vite and Supabase. Features role-based access (admin/user), real-time workflow step tracking across 5 milestone phases, progress circle visualization, admin user creation portal, project archiving, and full Supabase-backed persistence. Deployed to Vercel.

Inventory Management System | *JavaScript, PHP, SQL, jQuery, Full-stack*

- Full-stack inventory app automating stock tracking and updates to optimize operations for various company use.

Engine Map Filter Application | *Python, Tkinter, PyInstaller, Fieldwire, Windows*

- Windows desktop app for filtering and optimizing AeroScout Engine Map ZIP archives before Fieldwire uploads. Features drag-and-drop batch processing, auto map-ID scanning, checkboxes for ID selection, configurable output folder, automatic archive splitting for Fieldwire's 200 MB limit, partition recombination, and a map image collage viewer. Packaged as a standalone EXE for hospital server deployment.

Aeroscout Log Filtering App | *Python, Tkinter, openpyxl, PyInstaller*

- Desktop application for parsing and analyzing Aeroscout MobileView logs with time-window grouping. Features drag-and-drop processing and automated Excel reporting to accelerate system troubleshooting and diagnostics.

Particle Simulator | *Python, Django, SQLite, Web Scraping*

- Python/Django + SQLite simulator; scraped periodic-table data and modeled particle interactions (mass/charge).

Sias' Salt E-Commerce | *HTML, CSS, JavaScript, Supabase, Three.js, Responsive Design*

- Premium product landing page for an artisan salt brand featuring custom visual design, responsive navigation, polished motion, immersive hero treatment, Supabase integration, and Three.js-driven presentation touches to create a more elevated online shopping experience.

EDUCATION

University of Texas at El Paso

2019 - 2024

Bachelor of Science in Biochemistry and Computer Science

- **Honors:** Dean's List, Best Medical Science Student, Best Mathematical Student

TECHNICAL SKILLS

Languages: English — Native, Spanish — Fluent

Programming: Next.js, Python, React, JavaScript, TypeScript, jQuery, PHP, SQL, Flask, HTML/CSS, API Integration

Infrastructure: Networking & IP configuration, RF/RTLS systems, Server deployment, Cloud architecture, Vercel deployment, Postgres / Supabase, Blob storage, System commissioning, Hardware/software troubleshooting

Software: Full-stack web development, Automation scripting, Database design, System integration, Excel data processing, Rule-engine design, Diagram generation & export pipelines, Responsive UI design

Medical: Healthcare technology systems, Medical device knowledge, Clinical workflow understanding, Medical terminology

Soft Skills: Client management, Problem solving, Communication, Cross-functional collaboration, Simplifying complex systems

Sales: Technical sales, Solution selling, Stakeholder coordination, Bilingual client relationship building, Objection handling

Tools: Claude, ChatGPT, Gemini, Ollama, Docker, Git, Salesforce, Fieldwire, Microsoft SQL Server, Supabase, Vercel, Linux, Windows Server, VMware / Hyper-V, Cisco Wireless LAN Controller (WLC), Apache Tomcat, OpenSSL, ReportLab, openpyxl, Notion, Obsidian, Confluence, Jira

LEADERSHIP & INVOLVEMENT

- Assisting Project Manager — Securitas Healthcare Latin-American HUGS Projects
- Volunteer/Member — American Heart Association, University Medical Center, Local Churches
- Treasurer — Health Occupations Students of America (HOSA)
- Member — Dr. Bernard Harris Pre-Medical Society (TTU), Coding Interview Club
- Research Assistant — Texas Tech University, University of Texas at El Paso
- Programming Assistant — Back-end development for small businesses & university projects
- AI Club — Securitas Healthcare AI development playground developer and tester
