EXPERIENCE

Securitas Healthcare

Oct. 2024 – Present

Solutions Engineer / Project Manager / LATAM Clinical Educator / Developer

- Lead end-to-end solution design and deployment of hospital-wide RTLS, infant protection (Hugs & Kisses), and environmental monitoring systems across multi-site health systems, translating clinical workflow requirements into Cisco networking, RF infrastructure, and server architectures.
- Serve as the primary technical point of contact for hospital IT, clinical leadership, and executive stakeholders throughout the pre-sales and implementation lifecycle, scoping requirements, running solution demos, and driving technical wins from discovery through go-live.
- Own the full LATAM portfolio as the sole bilingual (Spanish/English) solutions engineer, leading implementations across Puerto Rico, Costa Rica, and Mexico and expanding delivery capacity in markets previously underserved due to language and regional coverage gaps.
- Manage project lifecycle for multi-site hospital deployments as assisting project manager, overseeing budgeting, vendor coordination, resource planning, deadline tracking, and escalation management across cross-functional teams.
- Partner with sales, product, and engineering teams to troubleshoot complex integration issues spanning databases, authentication, certificates, and wireless infrastructure, reducing escalations and accelerating time-to-value for hospital customers.
- Design and deliver bilingual clinical education programs, workshops, remote trainings, and go-live support for nursing, IT, and executive stakeholders, ensuring sustained adoption of patient safety technology in labor and delivery and other high-acuity units.
- Develop internal Python and AI-assisted tooling to automate deployment documentation, technical analysis, and reporting workflows, applying full-stack and machine learning experience to reduce manual overhead for the implementation team.

Entheospace

Feb. 2024 – May 2025

Software Engineer

- Developed and maintained web-based software using JavaScript, PHP, SQL, HTML, and CSS.
- Collaborated with cross-functional teams to integrate systems seamlessly.
- Improved software reliability by ~20% via testing and debugging.
- Integrated cloud solutions and automation to streamline inventory and logistics.

V-Clean

2022 – 2023

Account Manager

- Managed client relationships; contributed to ~15% YoY revenue growth.
- Built a centralized project-phase database to boost efficiency.
- Developed a quoting website; reduced the sales cycle by ~30%.

Jocelynn's Boots (Remote)

2019 – 2022

Procurement Manager

- Sourced and managed procurement for a leather-goods network.
- Implemented laser-etched leather products, driving ~10% revenue lift.
- Maintained vendor relationships; reduced lead times and expedited delivery.

UMC Lubbock, Las Palmas Medical Center

2019 – Present

Pharmacy Technician

- Enhanced digital pharmacy operations by resolving technical issues.
- Compounded and modified prescriptions with ~99% accuracy.
- First pharmacy technician recognized annually by nurses for excellence.
- Built foundational knowledge of medical devices (e.g., pacemakers).

PROJECTS

Machine Learning Tumor Classification | *Python, PyTorch, CNN, Medical Imaging*

- Built a CNN with PyTorch to classify brain tumor tissues from MRI scans; achieved ~95% accuracy across 2,000+ RGB images.
- Applied transfer learning and data augmentation to improve robustness on limited medical imaging datasets.

Project Management System | *Next.js, React, Supabase, Prisma ORM, AI (OpenAI), TypeScript, SQL*

- Full-stack Next.js platform for coordinating multi-stage hospital RTLS deployments with sequential workflow stages, AI-powered email drafting (OpenAI), and a real-time project dashboard.
- Supabase and Prisma ORM backend with TypeScript throughout; supports multi-site field engineer coordination with client info management and dark/light theme.

Dynamic System Architecture Builder | *Python, Tkinter, Next.js, TypeScript, ELK.js, Graphviz, ReportLab, PyInstaller*

- Desktop and web platform for designing Cisco and Non-Cisco RTLS/HUGS network architectures; desktop version packaged as a standalone Windows EXE via PyInstaller with Graphviz rendering.
- Next.js web implementation with ELK.js auto-layout; exports professional SVG, PNG, and PDF diagrams via URL-driven configuration and a ReportLab pipeline.

Environmental Monitoring Analysis Tool | *Python, Flask, openpyxl, xlrd, Rule Engine, Excel Automation*

- Python/Flask web app that parses Securitas MobileView exports and applies a configurable rule engine to cross-reference asset inventories and flag compliance and naming anomalies.
- Drives interactive filtering dashboards and generates client-ready Excel reports for investigation and remediation planning.

LPMC Scheduler | *Vite, JavaScript, Node.js, Postgres, Vercel Blob, Excel Processing*

- Responsive scheduling portal for Las Palmas Medical Center with public schedule viewing, admin Excel uploads, and PTO request and approval workflows.
- Vite frontend with a Node/Vercel backend using Vercel Blob and Postgres for cloud-backed storage; includes local JSON fallbacks for offline development.

Engine Map Filter Application | *Python, Tkinter, PyInstaller, Fieldwire, Windows*

- Windows desktop app that filters and optimizes AeroScout Engine Map ZIP archives before Fieldwire uploads; auto-splits archives at the 200 MB limit and recombines partitions on demand.
- Drag-and-drop batch processing with auto map-ID scanning and a map image collage viewer; packaged as a standalone EXE for hospital server deployment.

EDUCATION

University of Texas at El Paso

2019 – 2024

Bachelor of Science in Biochemistry and Computer Science

- **Honors:** Dean's List, Best Medical Science Student, Best Mathematical Student

TECHNICAL SKILLS

Programming: Next.js, Python, React, JavaScript, TypeScript, jQuery, PHP, SQL, Flask, HTML/CSS, API Integration

Infrastructure: Networking & IP configuration, RF/RTLS systems, Server deployment, Cloud architecture, Vercel deployment, Postgres / Supabase, Blob storage, System commissioning, Hardware/software troubleshooting

Software: Full-stack web development, Automation scripting, Database design, System integration, Excel data processing, Rule-engine design, Diagram generation & export pipelines, Responsive UI design

Medical: Healthcare technology systems, Medical device knowledge, Clinical workflow understanding, Medical terminology

Professional: Client management, Problem solving, Communication, Cross-functional collaboration, Simplifying complex systems, Technical sales, Solution selling, Stakeholder coordination, Bilingual client relationship building, Objection handling

Tools: Claude, ChatGPT, Gemini, Ollama, Docker, Git, Salesforce, Fieldwire, Microsoft SQL Server, Supabase, Vercel, Linux, Windows Server, VMware / Hyper-V, Cisco Wireless LAN Controller (WLC), Apache Tomcat, OpenSSL, ReportLab, openpyxl, Notion, Obsidian, Confluence, Jira

LEADERSHIP & INVOLVEMENT

- Assisting Project Manager — Securitas Healthcare Latin-American HUGS Projects
- Volunteer/Member — American Heart Association, University Medical Center, Local Churches
- Treasurer — Health Occupations Students of America (HOSA)
- Member — Dr. Bernard Harris Pre-Medical Society (TTU), Coding Interview Club
- Research Assistant — Texas Tech University, University of Texas at El Paso
- Programming Assistant — Back-end development for small businesses & university projects
- AI Club — Securitas Healthcare AI development playground developer and tester
